“One must imagine Sisyphus happy.”

Summary

I am a full stack software engineer with experience predominately using JavaScript, Python, and SQL technologies and frameworks. Particularly HTML, CSS, React, Redux, Express, Sequelize, Flask, Alembic, PostgreSQL, and SQLAlchemy. I am a quick learner and enjoy taking on new technologies, frameworks, and languages. I am a very optimistic person and collaborate well with other people even during high stress situations.

Projects

Anchor

*React, Redux, Flask, Alembic,
SQLAlchemy, PostgreSQL*

A PROGRESSION BASED HABIT TRACKING APPLICATION 📱🔗

January 2025

- Engineered RESTful API endpoints with Flask blueprints and JWT authentication middleware, enabling secure user-specific habit tracking and data protection.
- Implemented SQLAlchemy relationships with cascade delete rules and eager loading to maintain data integrity between habits, entries, and user statistics.
- Developed custom Redux reducers and thunk middleware to manage complex state updates for the progression system, ensuring consistent XP calculations across components.
- Created modular React components with custom hooks to handle real-time stat updates, separating UI logic from state management for improved maintainability.

Assemble

*React, Redux, Flask, Alembic,
SQLAlchemy, PostgreSQL*

LIKE ETSY, BUT IF THE AVENGERS USED IT 📱🔗

December 2024

- Established Git workflow with protected branches and PR requirements, leading code reviews and conflict resolution for a 4-person development team.
- Constructed a favorites system using Redux selectors and normalized state structure, enabling efficient cross-component updates and consistent data access.
- Designed reusable React components with prop drilling prevention through Redux, reducing component coupling while maintaining a single source of truth.
- Implemented optimistic updates with error handling using Redux thunk actions, providing immediate user feedback while maintaining data consistency.

Work Experience

Piedmont Shopper

Danville, Virginia

TECHNICAL SUPPORT CONSULTANT

Jan. 2018 - Jan. 2023

- Performed setup and continuous troubleshooting on computer hardware and software for employees.
- Engaged in network maintenance regularly by creating backups and monitoring traffic.
- Configured company server for SSH and FTP access, allowing employees to access files anywhere securely.

Caesars Entertainment, Inc.

Danville, Virginia

BLACKJACK DEALER

Jul. 2023 - Nov. 2023

- Maintained and carried out blackjack games in a fast-paced environment by utilizing quick math and multitasking.
- Secured and managed a rack of cheques at all times and handled large quantities of cash.
- Positively interacted with customers no matter their behavior towards me or other people by following standard procedures.

Education

App Academy

San Francisco, California

CERTIFICATE OF COMPLETION

August 2024 - January 2025

- Completed intensive 1000+ hour software engineering program with an acceptance rate lower than 8 percent.
- Built and deployed multiple full-stack applications while learning industry best practices and agile methodologies.
- Collaborated with diverse teams using Git workflow and version control in fast-paced development environment.
